

COMPLETE ELECTRICAL INSULATING OIL PROCESSING

KVA ELECTRIC, INC

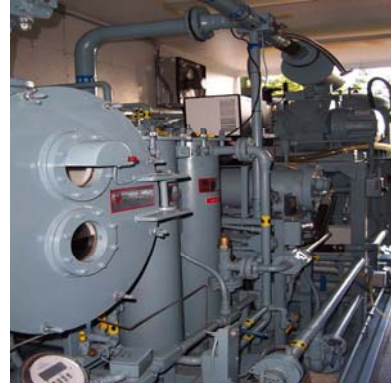

(425) 344-2544

KVA Electric, Inc.

Is pleased to now be able to offer you our newest service line for all of your transformer and oil filled equipment needs

Including:

- High-Vacuum, Hot-Oil Degasification
- Complete Water Removal (Dehydration)
- Acidity Balance Processing with Onboard Twin Fullers Earth Towers

Dryer transformers have longer insulation life which means longer asset life. Additionally, dryer transformers have less risk of dielectric failure during periods of high temperatures which means lower SAIFI and SAIDI.

In terms of cost effectiveness, hot oil processing represents a sound financial business approach to handling your old transformer oil.

With our Baron's unit, KVA Electric has the ability to hot oil process new transformers, dry out aged in service or stored units and reclaim and degas what would otherwise be considered waste oil for a fraction of the price of new oil.

KVA Electric, Inc ~ A preferred service provider for all Substation Maintenance, Repair and Installation Services
